Grade Tool Chests

GERSTNER Standard grade Tool Chests have been produced commercially for more than Thirty years. They have an established reputation among the best mechanics in the U. S. A., Canada and many foreign countries.

"NATIONAL" grade Tool Chests are now made to supplement the regular line with a good quality article at a lower price. They are designed for those mechanics who, for any reason, may want a lower priced chest of good construction. They will appeal to the apprentice who needs protection for his growing tool kit while learning his trade. They will serve the needs of any mechanic with a limited income, and will afford protection for his tools until he can get the standard grade chest. Any one who will choose this grade of chest, will appreciate the splendid values we are offering in this circular.

"NATIONAL" Chests are well built, and lock cornered construction is used. They are finished attractively in black imitation leather, and with nickeled trimmings. Several styles are also made in plain oak finish.

The several styles shown in this circular, are adaptable to the needs of most men; but if a wider selection is wanted, our catalog showing the complete line of Standard grade chests will be sent upon request.

SPECIAL CASES AND CHESTS

We also build all kinds of special cases and chests to order. Tool Cases, Instrument Cases, Sample and Model Cases, Salesmen's Cases, and Carrying Cases of any description, are made to exact specifications. If in need of any special cases, send us such details as you have available, and attractive prices will be quoted. On quantity orders, samples will be furnished at a nominal cost for approval. Attractive prices are gladly submitted on any quantity—one or a thousand and more.
